

EXPERIMENTA DESIGN 2003

LISBON BIENNALE / 17 SEPTEMBER / 2 NOVEMBER

VOYAGER 2003 SECOND MISSION BEYOND FRONTIERS

More than just a show room, not quite a container, situated half way between an artistic installation and a space cargo, Voyager03 is a singular moving object that works like an outlying picket of **Experimenta design – the Portuguese international Biennale** dedicated to design, creativity and contemporary culture.

In its first mission, in 2001, Voyager took a most unusual and provocative panoramic of Portuguese contemporary creation to Milan, Paris, London and Lisbon, showing previously unreleased work of national artists and designers.

This year, **Voyager03** repeats the recipe. The international circuit includes Barcelona, Madrid and Paris. In Lisbon it is part of the biennale program taking place from **September 17th** until **2nd of November**.

Voyager's cargo is precious. It includes reflections and proposals that more than 40 Portuguese creators have specifically developed on the biennale's theme, **"Beyond Consumption"**. There are pieces, projects, installations and artistic interventions of different creative areas, from music to architecture, from video to sound, graphic and industrial design.

Voyager's dense construction allows for a combination of exhibition solutions in and out of its structure. A musical halo involves the vehicle and its visitor in an atmosphere that fulfils all human senses.
